

MGA Badge Bar & Lamp Bracket Instructions

Part Numbers: AHH5565 / AHH5520 / AHH5521

Description: Badge Bar & Lamp Bracket

Applications: MGA

General Information

These badge bars are a reproduction of the original factory option badge bars and fit in the void between the bumper face and the overrider.

The badge bar can be fitted with or without the optional factory option spot/fog lamp brackets as these are also fitted in the void between the bumper face and overrider but attach directly to the bumper.

The badge bar has a boss attached to the fixing brackets which should allow the tightening of the bolts holding the overrider so that the badge bar is held firm. If a spot/fog lamp bracket is not used, you may need to use some packing washers to help fill the void.
