

Fitment of replacement inertia switch kit

Part Number:	C41220AX
Description:	Inertia Switch Kit
Applications:	Various (For electric fuel pump or fuel injection cars)

Instructions

1. The purpose of the switch is to cut off fuel supplied by ANY electric fuel pump.
2. The switch may be reset simply by pressing the rubber cover once. A faint but audible click will be heard when this occurs.
3. The switch must be fitted in an UPRIGHT position either where the original switch was (TR6) or anywhere else convenient, to taste.
4. The (supplied) wired plug can only be fitted one way.
5. The black lead feeds a warning lamp (also supplied) if required. This is optional and, if utilised may be unobtrusively fitted anywhere convenient. Its purpose is to let you know why the car has mysteriously stopped!
6. The 2 white leads are labelled so may pick up the original wiring, (TR6), or be simply wired in using fresh cables as the labels direct.
